How to Determine if YOU live in a HIGH RISK WILDLAND URBAN INTERFACE RESIDENTIAL AREA

The High Risk Wildland Urban Interface (WUI) dataset defines geographical areas across the state where human development, structures, and infrastructure meet or intermingle with undeveloped wildland vegetation and **where fuels and ember loads in combination with structure density** and **historic fire occurrence indicate high risk.** This mapping is created specifically to identify and prioritize structures most susceptible to the devastating impacts of wildfire, where **property owners can be informed of how to reduce their wildfire risk.** The primary purpose of the High Risk WUI boundary is to guide critical risk assessment **and to facilitate compliance with Utah law.** To learn more you can view our **Frequently Asked Questions Page** or **download the GIS data** for the **High Risk WUI boundary Below.**

***If you Live in a RED AREA and…You MUST ZOOM IN ON GIS DATA MAP as IT APPEARS VERY SMALL at First! You live in a HIGH RISK WILDLAND URBAN INTERFACE RESIDENTIAL AREA**

I have included **EIGHT screenshot MAPS** of general HIGH RISK WILDLAND URBAN AREAS of **PARK CITY** in **SEPERATE .pdfs** in my **XERISCAPE LIST** on **INTERNET ARCHIVE WEBSITE.** PLEASE VISIT **DIRECT URL BELOW** if YOU **DO NOT** FIND **YOUR STREET ADDRESS. PLEASE GO TO THE URL ADDRESS BELOW, THEN CHOOSE CLICK HERE TO PROCEED and ZOOM IN on the MAP. ATTEMPTING to DOWNLOAD the DATA may RESULT IN FRUSTRATION, as MOST HOMEOWNERS do NOT OWN THE SOFTWARE REQUIRED.**
